

Make The Move to Zero-Waste Carbon Filters

Blade Filters is a leader in the cannabis air filtration industry and has created the world's first zero-waste carbon filter. Through our innovative design of a replaceable carbon cartridge, users never have to replace their entire carbon filters again. By only exchanging the carbon cartridge, **we make changing your filters quicker, cheaper, and easier**, by reducing the process from 30min to 2min, and also cutting costs by at least 25%.

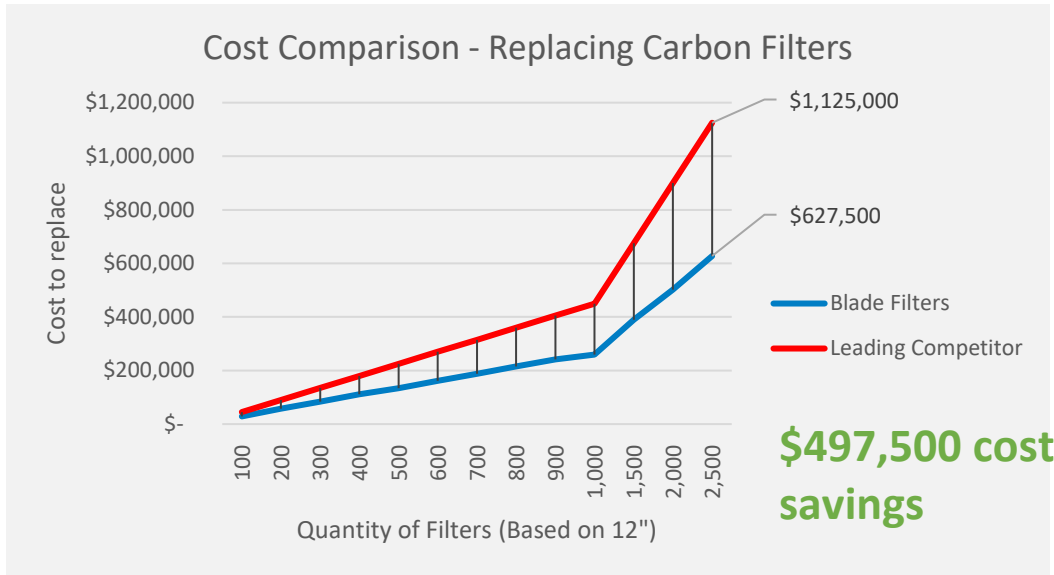

With years of research, we are focused on creating and integrating solutions that resolve grower pain points around air filtration. Providing full turn-key air filtration solutions, we are able to ensure your facility meets, and exceeds, government regulations.

Why Blade Filters?

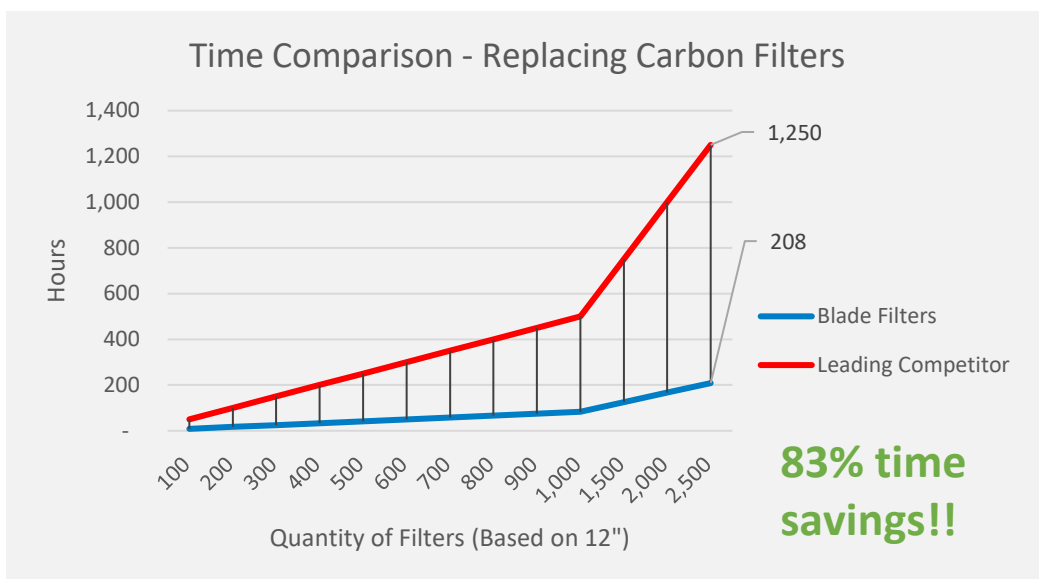

- **Cost Savings**

By only having to replace the carbon cartridge, users will **save in carbon filter costs**. This will help increase the bottom line for any organization.

- **Time Savings**

We have reduced the time it takes to change your carbon filters from 30 minutes per filter, to only two minutes. Less time changing filters means less money spent on wages, and more time spent growing. Let your team focus on what they do best, growing, and have the filter experts come in to change your filters. We will send a team to your facility, on a scheduled basis, to change your filters so you never have to worry about this task again!

- **GMP, GPP, ISO-8, and Government Recommended**

Removing up to 98% of VOCs, carbon filters are GMP, GPP, ISO-8 compliant. Having worked on numerous Health Canada applications, our carbon filters will ensure you have effective odour control.

- **Superior Carbon**

We use **North American, virgin, granular activated carbon.** We performed head-to-head carbon tests, measuring VOC removal, against leading competitors then selected the carbon which outperformed them. All carbon is first screened to remove any excess dust and small particles, then it is machine packed into the filters to ensure consistent quality and no air pockets.

- **Green Image**

Blade Filters allows you to be a leader in an industry that has received much scrutiny for unsustainable growing practices. Through our recycling program, you never have to throw your carbon filters away again. **Be part of a community that is taking a 100% wasteful process down to zero waste**, and join the future of sustainable cultivation methods. You can set yourself apart from the competition, opening up new marketing opportunities to direct consumers and retailers alike.

- **Proudly Canadian**

Based in Ontario, we are proudly Canadian with all designs, assembly and offices located in Canada.

- **Exceptional Customer Service**

Building long-term relationships with all clients is one our core values. For that reason, we are there, on a constant basis, responding to all your demands promptly and effectively.

Our Experience

We have worked with numerous Licensed Producers in Canada to solve their air filtration issues in an efficient, and effective manner. With a well diverse team, we have the resources necessary to meet the demands of all our clients. Whether it's creating a custom solution, or simply supplying carbon filters, we will be there every step of the way ensuring your requirements are met.

- Who We've Worked With

and many more...

"Blade Filters is a technical team who have solved a substantial waste and cost problem for odour intensive farms. They identified a pain point for their customers, engineered a solution, and have the potential to lead their market with unique proprietary technology"

– Dan Sutton, Founder and CEO, Tantalus Labs
